

## [What you need to know about the COVID-19 vaccine](#)

In view of the COVID-19 pandemic putting humanity in peril, there have been frantic scientific efforts for discovering appropriate drugs to treat the disease and also a race to find a vaccine and then fast-track its use to immunize human beings against COVID-19 caused by the coronavirus SARS-CoV-2. Bill Gates, the Founder of Microsoft Corporation and one of the two persons behind the Bill & Melinda Gates Foundation is known as a man of computer and computer programs. He however has put together an impressive piece (with all necessary basics) on the humanity's race for a vaccine to provide a permanent solution against COVID-19 in his personal blog The GatesNotes. The information contained in the article, I am told, is something that medical students find rather challenging to gather and digest. I hope readers of the article to be found through [this link](#) will be able to understand the complex processes involved in vaccine development.
